BUYER'S MANUAL

Manual for publishing purchasing requirements and locating suppliers.

This manual contains instructions for the process of publishing purchase requirements and locating suppliers for companies purchasing from the SChain platform.

S∞chain
System of Capacities and Productive Articulation

CONTENT.

1. Buyer Panel.

2. Business Opportunities Panel (business linking).

3. Posting the requirement.

4. My supplier requirements.

5. Scheduling appointments with suppliers.

In this guide, we'll help you better understand a purchasing company's requirements publication process, as well as the information required to complete the form questions. Remember that the more accurate the information, the better the results and benefits the system offers.
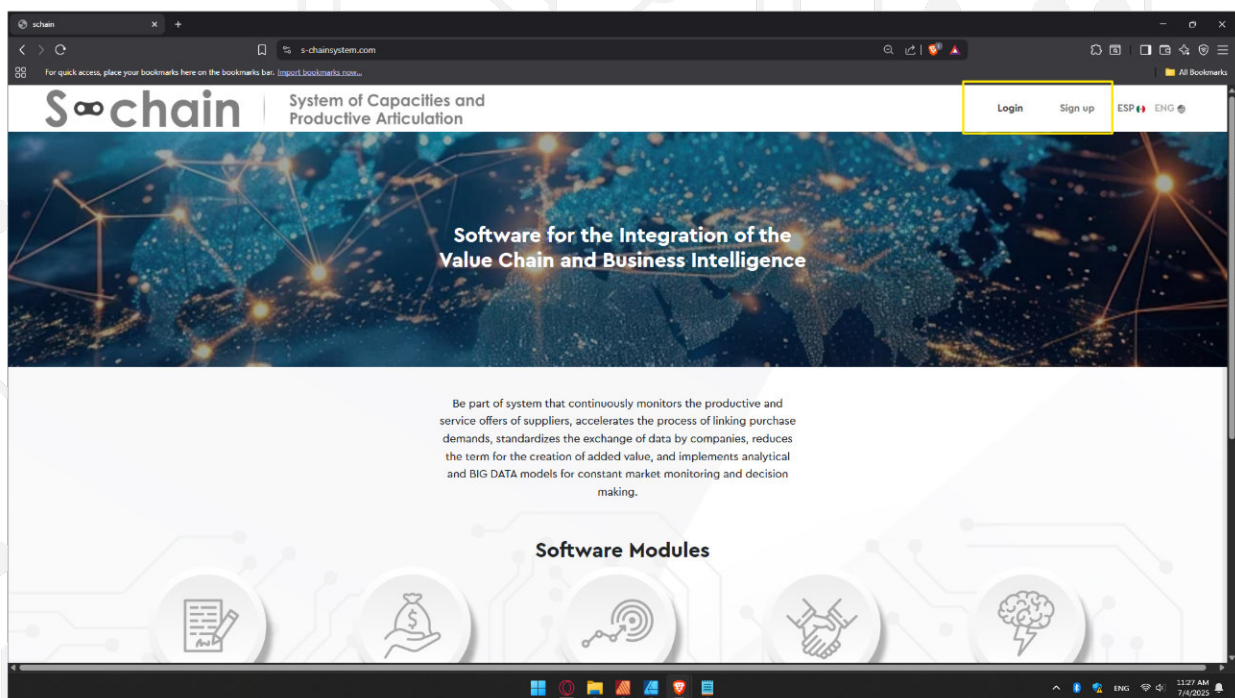

BUYER PANEL

To begin, you must first log in with your buyer credentials. This is because the only people who can post requirements are the purchasing companies.
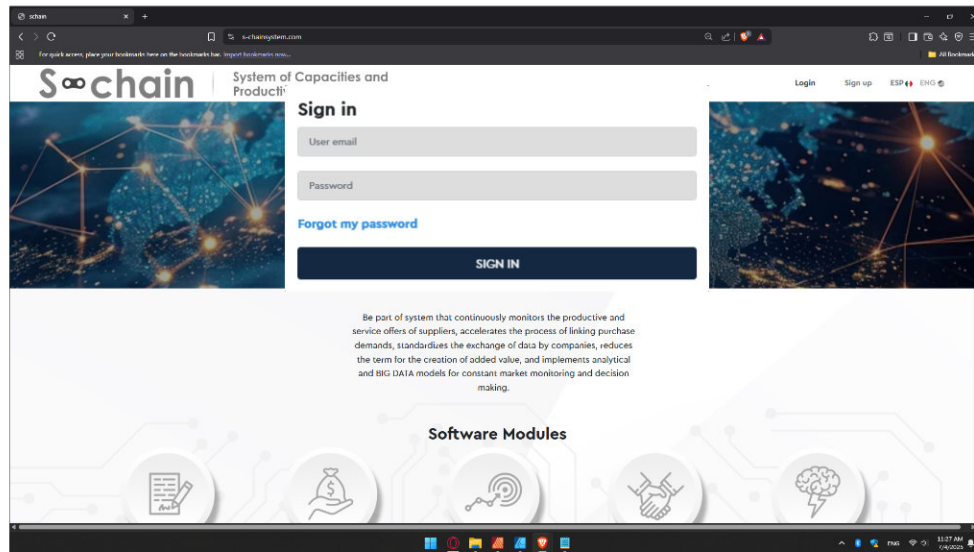

1.1 Login

Go to the website http://s-chainsystem.com in your browser.

The login button is located in the upper right corner of the main screen as shown in the image.
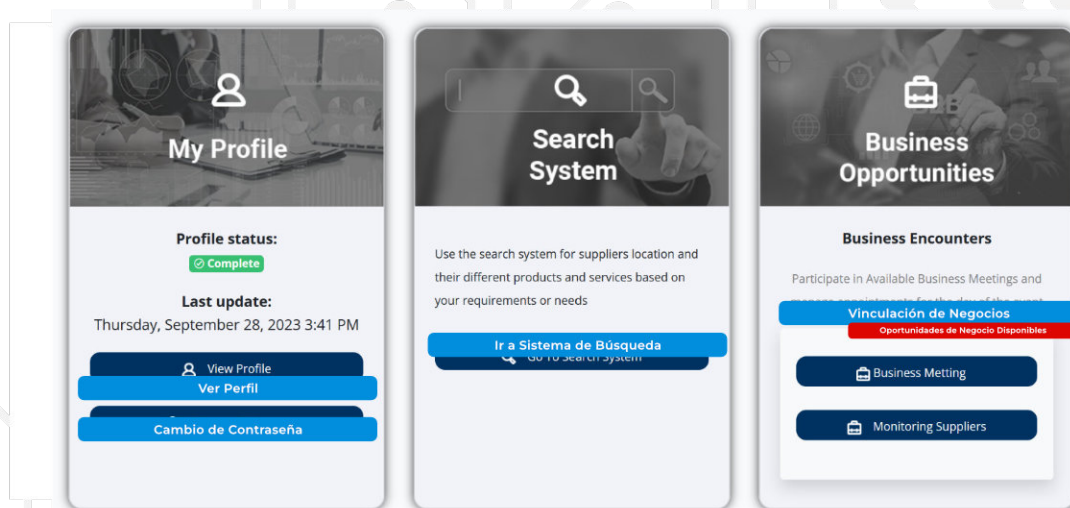

Clicking on it will display a modal allowing us to enter our platform access credentials.

Finally, if the credentials are correct, you will be automatically redirected to the buyer panel.

1.2 Buyer Panel

Upon logging in, the system will take you to your buyer dashboard, where the following interface will appear.

Aquí se encontrarán tres secciones principales: 1) Perfil de la empresa. 2) Sistema de búsqueda. 3) Oportunidades de negocio.

To publish a requirement, we will enter the business opportunities section and select Business Linkage
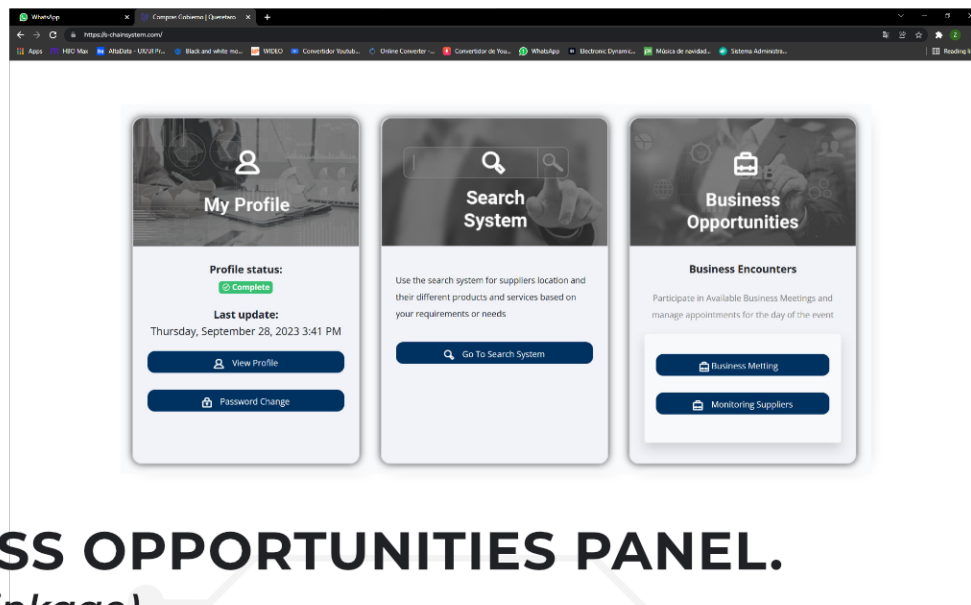

BUSINESS OPPORTUNITIES PANEL.
(Business linkage)

In the business opportunities panel (business linking), we'll find the following four sections that deal with everything related to requirements and business appointments.

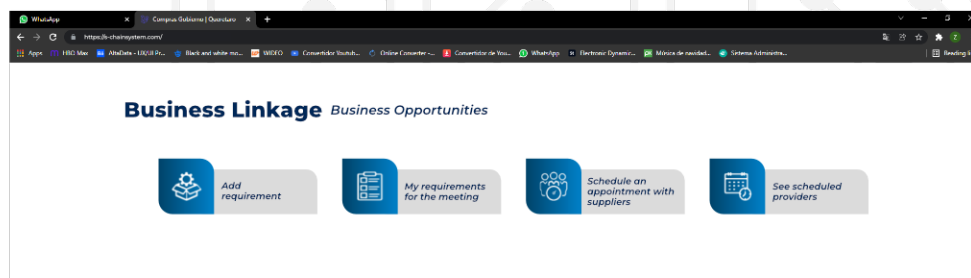

WE REMIND YOU THAT ONCE YOU PUBLISH YOUR REQUIREMENTS, PROVIDERS WILL ONLY BE ABLE TO SEE THAT INFORMATION AND WILL NOT HAVE ACCESS TO YOUR NAME OR CONTACT INFORMATION. THEY WILL ONLY BE ABLE TO REQUEST APPOINTMENTS THROUGH THE SYSTEM.

PUBLICATION OF THE REQUIREMENT

Publishing a requirement involves capturing the specific information about the service or product that the purchasing company needs. This will allow suppliers to fully understand the buyer's needs and thus facilitate business relationships.

To begin, go to the Add Requirements section.
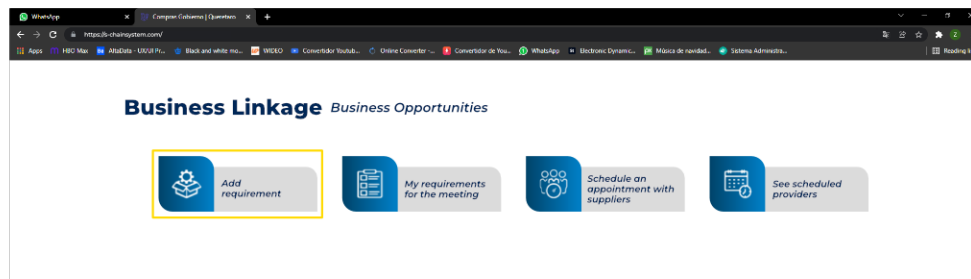

3.1 Type of requirement

On this occasion, supplier requirements are captured. The questionnaire includes the following information:
- Requirements characteristics.
- Supplier profile.

It is important to mention that the more detailed the requirements are, the better the supplier identification results will be. When finished, select the Publish Requirements button to complete the questionnaire.

MY SUPPLIER REQUIREMENTS

All the sourcing requirements you have published can be viewed in the second section, My sourcing requirements, in the buyer dashboard.

Once the request is published, the system includes automated elements that send alerts to the supplier's email so they can access it and request business appointments.

SCHEDULE AN APPOINTMENT WITH SUPPLIERS

Use this option to view appointment requests from providers who have applied to one of your requirements. If your evaluation is positive, you must register the activity to begin the link.

# S∞chain | System of Capacities and Productive Articulation
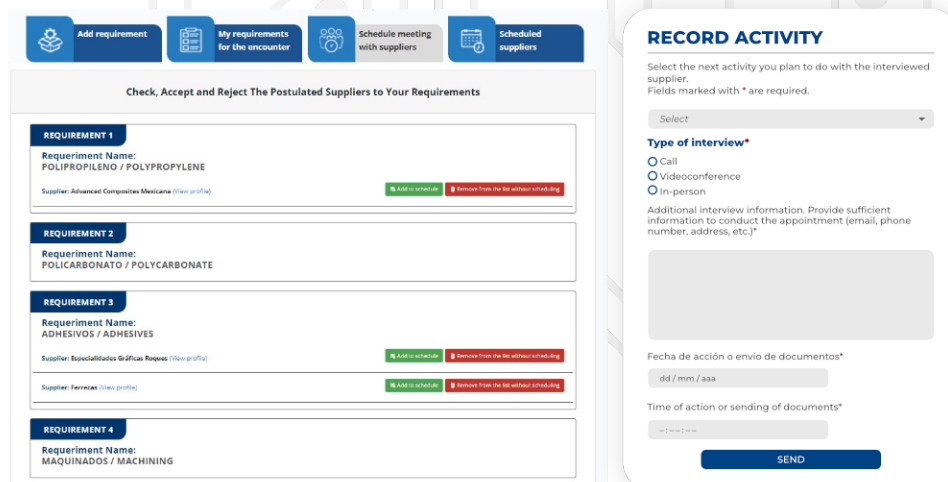

SCHEDULED SUPPLIERS

Once you register your activity with the scheduled supplier, the system will send them a notification of the activity. Once the supplier has been served, we ask you to log in to the system and record the follow-up of the business appointments made with the suppliers you scheduled during the event. This will help you find more suppliers that meet your needs.

If you have any questions, please contact Grissel Jiménez at grissel@capim. com.mx and/or phone (656) 534 1559 and we will be happy to assist you.

SEARCH SYSTEM PANEL

Use the search system to locate suppliers and their different products and services. To perform a search, we enter the search system section and select Go to search system which will take us to the search system.
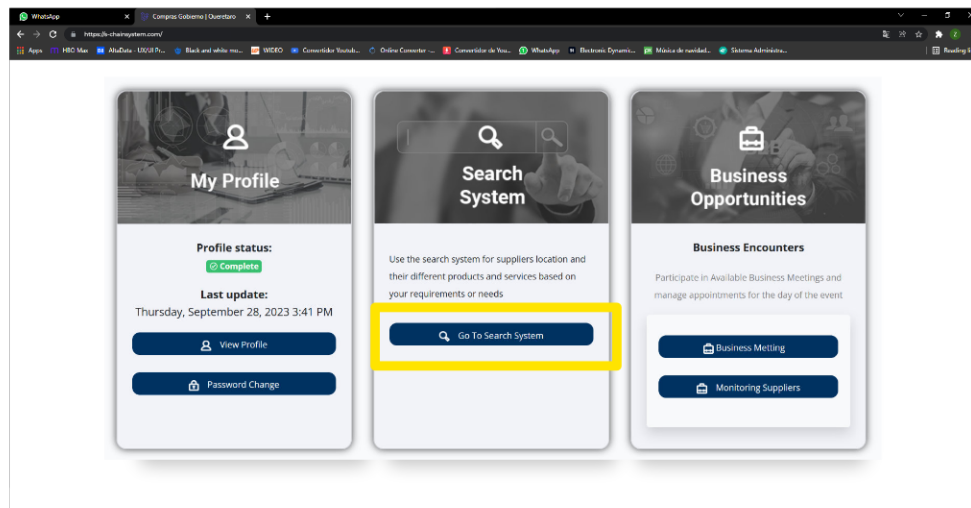

The search system allows us to search for suppliers and different products and services through the following options:

SEARCH BOX

Using the search box, we enter either the process, product, or service. The system will automatically show us a list of suggestions as we type. We select an option from this list and click on the magnifying glass so that the system shows us the search results.

```

```
Engineered plastics
Plastic injection
Structural plastics

FILTERS

Using the different filters, we can perform searches based on company data, production processes, capacity, and quality systems. We can use the filters in the search box to perform other searches. Finally, we click on the Perform search button.
